

Construction Adhesives

Dualite® E™ products are low density microspheres recommended for evaluation as lightweight additives to reduce density, increase volume solids, and lower volume cost. These resilient polymeric microspheres can maintain, or may enhance, end product properties. By reducing the density of your final product by formulating with Dualite® E™ microspheres, you can substantially increase the number of gallons per shipment.

Product Features	
• Sprayable	• Shear stable
• Non-friable	• Compressible
• Pumpable	• Flexible

Product Benefits			
• Reduces weight	• Thermal insulating	• Increase trowelability	• Sound damping
• Reduces cost	• Reduces shrinkage	• Reduces weight	• Reduces VOCs

Dualite® Grade	Nominal Density (g/cc)	Particle Size Mode (Peak)
Dualite® E030™	0.030 +/- 0.005	125-145 µm
Dualite® E065™-135D™	0.065 +/- 0.005	125-145 µm
